

In the last few years GLUETEX GmbH developed many new innovative products in a close co-operation with the leading manufacturers of adhesive products and technical textiles.

After introduction of the gluing technology for sun protection textiles, GLUETEX has started in 2009 to step into new markets. Beside regular hotmelt adhesive tapes, GLUETEX offers a wide range of adhesive films and adhesive foils and seam sealing tapes for all kinds of application.

In co-operation with leading machine manufacturers, GLUETEX approves all adhesive products for their use under production environment. This ensures that our customers get „ready to use“ and reliable products.

Adhesive Tapes Adhesive Films

Adhesive Tapes/Adhesive Films

Arten von Folien:

- Hotmelt-/Schmelzklebefolien
- Nahtabdichtbänder

Types of Adhesives:

- Polyurethane
- Polyester
- Polyamide
- Polyethylene

Bonding of:

- Plastic
- Metals
- Textiles
- Natural products

Applications a.o.:

- Textile sun protection
- Clothing
- Outdoor
- Filter production
- Automobile
- Medical technology

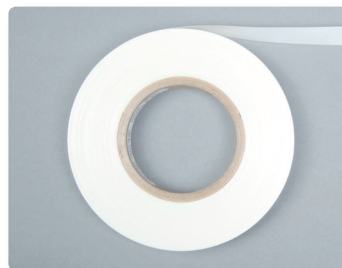

If you are looking for a process solution with adhesive products, please do not hesitate to call us!

Hotmelt Adhesive Films

The activation of the hotmelt films and the tapes can be done by heat, ultra sonic, hot air, thermal pulse, infrared radiation and high frequency. Therefore, it is possible to apply different technologies for processing these products.

The cooling down and the solidification of the adhesive occurs within a few seconds. Thereby, the glued products are right away able to work under pressure and ready for any further processing.

- Good substitute for liquid adhesives
- Solvent-free
- Precise application possible
- Short cooling-down periods
- Not reinforced (pure adhesive in foil form) or with glass fiber or non-woven reinforced

Seam Sealing Tapes

Seam sealing tapes are used to seal and proof seams of coated and breathable foils as well as technical fabrics.

The Gluetex GmbH offers two and three layer seam sealing tapes.

Two layer tapes consist of a hotmelt layer as well as a waterproof and higher melting outer layer.

Three layer seam sealing tapes have a hotmelt layer, a waterproof higher melting interlayer as well as a textile outer layer. The textile varies in function and colour and can be adjusted to the customer's specific requirements.
